

Create Your Own Paint by Numbers

- Computer with internet access
 - Paper
 - Printer
 - Colored Markers or paint
1. Choose an image from the internet or your own files. It's important that you choose a simple image with good color contrasts.
 2. Upload the image to <https://pbnify.com/>
 3. Click on points in the image that you want converted into a number to color. The more points you click on, the more complicated the paint by number will be. You can delete any colors that you don't want to include.
 4. When you are done choosing points, click on the blue button PBNify. You will then see a "filled image".
 5. To see the paint by number version, click on the blue button Outline. To print it out, click on the save button and then press Ctrl-P on your keyboard.
 6. To print out the color palette, click on the green button Save Palette. You can take this palette to a hobby shop to purchase colors that are similar to the palette.
