Fires in manufactured homes claim the lives of 345 Americans each year and injure 765 more. Many of these fires are caused by heating and electrical system malfunctions and improper storage of combustibles.

The U.S. Fire Administration (USFA) would like consumers to know that there are simple steps you can take to prevent the loss of life and property in home fires.

**THE PROBLEM**

During a typical year, manufactured homes account for 17,700 fires, hundreds of deaths and $155 million in property losses. Manufactured homes have a fire death rate per 100,000 housing units 32-50 percent higher than the rate for other dwellings.

**THE FACTS**

Young children account for more than one-fifth of all fire deaths in manufactured homes. A recent study of rural fires showed that smoke alarms were less likely to be present or operating in manufactured homes.

**THE CAUSE**

Electrical system malfunctions and heating fires are the leading causes of fire in manufactured homes. Together, they account for one-third of manufactured housing fires. Electrical distribution fires occur nearly twice as often in manufactured homes as in one- and two-family dwellings.

**SAFETY PRECAUTIONS**

- Have a minimum of two smoke alarms installed in your home regardless of sleeping space arrangements.
- Install smoke alarms in accordance with smoke alarm manufacturer guidelines. Test your smoke alarms once a month and replace the batteries at least once a year.
- Maintain your home heating system by having it serviced at least once a year by a professional.
- Do not store combustibles or flammables near heat sources.
- Never overload outlets, extension cords or electrical circuits. If the circuit breaker trips or fuses blow, immediately call a licensed electrician to check your system.
- Have an escape plan and practice escape routes with your family.
- Space heaters need their space. Do not place portable space heaters close to drapes, clothing or other combustible materials.
- Install skirting material to keep leaves and other debris and combustible items from blowing under your manufactured home.
- When considering a new home, ask if residential sprinklers are available as an option.
- If there is a fire - get out immediately, go to a neighbor’s and notify the fire department using the 911 system or the proper local emergency number in your area.
